

AIDEN KUNSCH

Boston, MA • 508-439-9512 • kunsch.a@northeastern.edu • www.aidenkunsch.com

EDUCATION

Northeastern University – Boston, MA

May 2029 (expected)

- Candidate for Bachelor of Science, Mechanical Engineering, Minor in Bioengineering
- **GPA:** 3.72 | Dean's List (all semesters)
- **Relevant Coursework:** Cornerstone of Engineering, Physics 1–2, Calculus 1–3, Statics
- **Activities:** Northeastern Mars Rover Team, Theme Park Engineering Club, American Society of Mechanical Engineers, NU Pep Band

Shrewsbury High School – Shrewsbury, MA

June 2025

- **GPA:** 4.83 (5-point weighted scale)
- **Activities:** Eagle Scout (2024), selected to attend MA Boys State (2023), Jazz Band and Wind Ensemble (trumpet section leader), Varsity Alpine Ski Team

TECHNICAL SKILLS

- **Software:** SolidWorks (CSWA), Fusion 360, AutoCAD, MATLAB, Python, C++, Adobe suite, Office suite
- **Equipment:** 3D printing (FDM, SLA), laser cutting, CNC mill, microcontrollers (Arduino, Raspberry Pi)
- **Languages:** Spanish (working proficiency) | MA State Seal of Biliteracy

WORK EXPERIENCE

Massachusetts Biomedical Initiatives | *Operations Intern* – Worcester, MA

Apr. – Sep. 2026

- Led planning of an 8,000 sq. ft. makerspace supporting biotechnology startups
- Directed equipment and vendor selection while managing a ~\$100K equipment budget
- Reduced equipment costs 60% below the original estimate through vendor selection and sourcing
- Developed standard operating procedures (SOPs) for equipment use and lab safety
- Designed lab space layout and oversaw equipment setup and maintenance

PROJECTS

Northeastern University Mars Rover Team | *Mechanical Co-Lead*

Sep. 2025 – present

- Manage tasks and track progress for a ~20-member mechanical team; coordinate with other sub-teams on long-term projects and system integration
- Leading design and fabrication of an over-wheel swerve drive system to reduce load on steering motors and increase maneuverability
- Redesigned mechanical systems for the University Rover Challenge, including end effector modifications and new wheel spoke geometry and materials for better traction
- Modeled 5+ hardware mounts for power distribution boards, cameras, and controllers in SolidWorks and fabricated using FDM and SLA 3D printing
- Placed 2nd at the 2026 Canadian International Rover Challenge

Northeastern University Theme Park Engineering Club | *Mechanical Engineer*

Sep. 2025 – present

- Design and fabricate components for a competition-scale amusement park ride, including a restraint system modeled in Fusion 360 and built with laser cutting and FDM printing
- Verified design compliance with ASTM standards F2291, F1193, and F770
- Designed and manufactured an interactive exhibit for a children's engineering showcase, facilitating community outreach for the club

Automated Pill Dispenser | Northeastern University

Jan. – Apr. 2026

- Designed and built an automated pill dispenser using an Arduino-controlled, RFID-triggered, stepper-driven hopper mechanism
- Achieved 100% dispensing accuracy across 55 trials of three patient prescriptions, exceeding the 95% target, at a total build cost of under \$70
- Led CAD modeling and design, 3D printing, and laser cutting; assembled Arduino hardware and programmed in Arduino C++
